**In the partial fulfillment of  
Post Graduate Diploma in Advanced Computing**

**September 2022 – March 2023**

# CERTIFICATE

This is to certify that the project report entitled "**National Career Service Portal**" submitted by **AMITKUMAR ZATINGRAO HERKAR** and **ANKIT KUMAR GUPTA** has been carried out under my guidance and supervision. The project report is approved for submission towards partial fulfillment of the requirement for the award of PG Diploma in **ADVANCED COMPUTING** from **CDAC ACTS, CHENNAI**.

Date: 10/03/2023

Place: Pune

External Examiner

# DECLARATION

We hereby declare that the project entitled "**National Career Service Portal**" which is being submitted in partial fulfillment of the requirement for award of PG Diploma in **ADVANCE COMPUTING** to "**CDAC ACTS, CHENNAI.**" is an authentic record of our own work done under the guidance of **Mrs. Narmadha Baskaran**. The matter reported in this Project has not been submitted earlier for the award of any other degree.

Date: 10/03/2023

Place: Pune

**AMITKUMAR ZATINGRAO HERKAR**

Date: 10/03/2023

**ANKIT KUMAR GUPTA**

# **ACKNOWLEDGEMENT**

We sincerely express indebtedness to esteemed and revered guide "**Mrs. Narmadha Baskaran**", Project Trainer in "**CDAC ACTS, CHENNAI**", for his invaluable guidance, supervision and encouragement throughout the work. Without her kind patronage and guidance the project would not have taken shape.

We owe sincere thanks to all the lecturers in "**CDAC ACTS, CHENNAI**" for their advice and counseling time to time.

# **1. Introduction**

This Portal is a web system that provides the function and features to authenticate and identify the users and provide them with easy, intuitive, personalized and user-customizable web-interface for facilitating access to information and services that are of primary relevance and interests to the users. National Carrier Service Portal is nothing but a portal which thinks job seekers as the main target users & provides so many useful services to jobseekers at a single place & through a single interface but in customized form.

This project is aimed at developing a web site for Online Carrier Service Portal. It is of great importance to the unemployed people. This site allocates the right job information for suitable persons. All the jobseekers as well as job providers information are stored in the database.

## **1.1. Purpose:**

The purpose of this software system is to create a user-friendly online platform that provides comprehensive job-related services to job seekers and employers across India. The National Career Service Portal aims to provide a common platform for job seekers and employers to interact, collaborate, and achieve their respective goals.

## **1.2. Scope:**

The NCSP is a web-based application that provides various services to job seekers and employers. The NCSP aims to provide job seekers with comprehensive information on available jobs, skill requirements, and job training programs. The platform also enables employers and companies to post job openings and find suitable candidates. The scope of the NCSP extends to all regions of India, and it is accessible to all job seekers, companies and employers across the country. The NCSP offers services to making it accessible to individuals from diverse backgrounds.

## **1.3. Overview:**

The NCSP is an online platform that provides job seekers with access to a wide range of job opportunities across various industries. The platform offers a range of services, including career counseling, skill assessment, job matching, and vocational training. The NCSP also provides employers with access to a large pool of potential candidates and tools to help them streamline their hiring process.

The NCSP is a user-friendly platform that is easy to navigate and provides customized job search results based on the user's preferences and skills. The platform is free to use for job seekers, companies and employers, making it an accessible resource for everyone.

## **2. System Analysis**

This project is aimed at developing a web site for Online Job Portal. It is of great importance to the unemployed people. This site allocates the right job information for suitable persons. All the jobseekers as well as job providers information are stored in the database.

### **2.1. Feasibility Study:**

The feasibility study analyzes the technical, economic, and operational feasibility of the project. The feasibility study confirms that the project is viable and sustainable.

**2.1.1. Operational Feasibility:** The operational feasibility study confirms that the project is operationally feasible. The project requires a team of dedicated staff to operate and maintain the platform.

**2.1.2. Technical Feasibility:** The technical feasibility study confirms that the project is technically feasible. The project requires modern web technologies such as HTML5, CSS3, JavaScript, React Js and Bootstrap. The development team has the necessary skills and expertise to implement the project.

**2.1.3. Economic Feasibility:** The economic feasibility study confirms that the project is economically feasible. The project requires a significant investment of time, resources, and money. The benefits of the project, such as reducing unemployment and improving the job matching process, outweigh the costs.

## **2.2. Software Specification:**

The software specification defines the software requirements for the National Career Service Portal.

### **2.2.1. Functional Requirements:**

- Jobseeker can register to web application by entering valid details and after registration the Jobseeker can login to their account.
- Jobseeker has been provided with option to Search job which are uploaded by different companies.
- In order to apply for the job, the jobseeker has to fill details and apply for the job.
- The response for the companies for which job has been applied by job seeker is seen in functionality of response.
- The job provider can upload new jobs and search for the applicant who has applied for the jobs.
- In order to send some message, the job providers can shortlist the jobseekers and send some response to the job seekers.

- The administrator can delete job provider account and can approve/not approve the job providers for using the application.
- Apart from mentioned functionality there are also common functionality like delete account, Change password etc for both job providers and seekers.

## 2.2.2. Non Functional Requirements:

- **Security:** Registered User will allow searching job. Each job provider will be to access system through authentication process. Who are you? System will provide access to the content, operations using Role based security (Authorization) (Permissions based on Role) using SSL in all transactions which will be performed stakeholder. It would protect confidential information shared by system to stake holder of Shared by stakeholder to system. System will automatically log off all stakeholder after some time due to inactiveness. System will block operations for inactive stakeholder and would redirect for authentication. System will internally maintain secure communication channel between Servers (Web Servers, App Servers, database Server) sensitive data will be always encrypted across communication. User proper firewall to protect servers from outside fishing, vulnerable attacks.
- **Reliability:** The system will backup business data on regular basis and recover in short time duration to keep system operational Continuous updates are maintained , continuous Administration is done to keep system operational. During peak hours system will maintain same user experience by managing load balancing.
- **Maintainability:** Commercial database software will be used to maintain System data Persistence. A readymade Web Server will be installed to host online shopping portal (Web Site) to management server capabilities. IT operations team will easily monitor and configure System using Administrative tools provided by Servers. Separate environment will be maintained for system for isolation in production, testing, and development.
- **Accessibility:** Only registered job provider will be able to provide a job after authentication. Administrator can reject or approve registration , job provider details based on role information.
- **Safety:** online carrier service portal will be secure from malicious attack, fishing. Online portal functionalities are protected from outside with proper firewall configuration. Online shopping portal will be always kept updated with latest antivirus software. Business data will be backed up periodically to ensure safety of data using incremental back up strategy. Role based security will be applied for Application data and operations accessibility.
- **Modularity:** System will design and developed using reusable, independent or dependent business scenarios in the form of modules. These modules will be loosely coupled and highly cohesive.

## **2.3. Operating Environment:**

### **2.3.1. Server Side:**

- **Processor:** Intel® Xeon® processor 3500 series
- **HDD:** Minimum 500GB Disk Space
- **RAM:** Minimum 4GB
- **OS:** Windows 10, Linux 6
- **Database:** MySQL

### **2.3.2. Client Side (minimum requirement):**

- **Processor:** Intel Dual Core
- **HDD:** Minimum 80GB Disk Space
- **RAM:** Minimum 2GB
- **OS:** Windows 7, Linux

## **2.4. General Constraints:**

- The application will use React js, java script and CSS as main web technologies.
- HTTP and FTP protocols are used as communication protocols. FTP is used to upload the web application in live domain and the client can access it via HTTP protocol.
- Several types of validations make this web application a secured one and SQL Injections can also be prevented.
- National Career Service Portal is a web-based application, internet connection must be established.
- The National Career Service Portal will be used on PCs and will function via internet or intranet in any web browser.

### **3. System Design**

The National Career Service Portal is designed to provide job matching and placement services to individuals seeking employment opportunities. The system design includes modules for registration, profile creation, job search and matching, employer services.

#### **3.1. Module Design:** The NCSP will be designed with the following modules:

- Registration Module: This module will allow users to create an account on the National Career Service Portal. Users will need to provide basic personal information, such as name, email address, phone number, and date of birth. Users will also be required to create a username and password.
- Profile Creation Module: Once registered, users will be able to create a profile that includes their education, work experience, skills, and interests.
- Job Search and Matching Module: This module will allow users to search for job openings based on their preferences, such as location, job title, industry, and salary. The system will match users with job opportunities based on their skills, experience, and qualifications.
- Employer Services Module: Employers will be able to create accounts on the National Career Service Portal and post job openings. Employers will be able to search for candidates based on their skills, experience, and qualifications.
- Company Services Module: Company will be able to create accounts on the National Career Service Portal and post job openings.
- Admin Module: Admin handle companies approval for verifying it's valid or not.

#### **3.2. Input Design:** The NCSP will have the following input design:

- User registration information (name, email address, phone number, date of birth, username, password)
- Profile information (education, work experience, skills, interests)
- Job search preferences (location, job title, industry, salary)
- Employer information (company name, job openings)

#### **3.3. Output Design:** The NCSP will have the following output design:

- User profile information (education, work experience, skills, interests)
- Job search results (job openings, job descriptions, employer information)

### **3.4. Database Design:**

The National Career Service Portal will use a relational database to store user information, job postings. The following tables will be included in the database:

- User Table (name, email address, mobile number, password)
- Company Table (company name, company email address, company mission, company status, password)
- Applicant Table (name, email address, marital status, sex, date of birth, applying for job, qualification, experience)
- Job Table (job title, job description, location, industry, salary, experience)
- Feedback Table (name, company name, feedback message)

## **4. System Development**

### **4.1. Technology Used:**

#### **4.1.1. Front-End Technologies:**

- React Js: React JS is used for building interactive user interfaces. It is a popular JavaScript library that allows developers to create reusable components and manage application state.
- Bootstrap: Bootstrap is a front-end framework that provides pre-built components and styling for building responsive web applications.

#### **4.1.2. Back-End Technologies:**

- Spring Boot: Spring Boot is a Java-based framework that simplifies the development of web applications. It provides features such as auto-configuration, dependency injection, and web services.
- MySQL: MySQL is a popular open-source relational database management system. It is used for storing and retrieving data related to user profiles, job listings, and other application data.

#### **4.1.3. Other Technologies:**

- Git: Version Control System used for code management.

## **5. System Testing and Implementation:**

### **5.1. Unit Testing:**

The development team will perform unit testing on each module of the system to ensure that each module functions as expected. The unit testing will be automated wherever possible to improve the efficiency of the testing process.

- Test Case ID: U001
- Test Case Description: Verify that the job search function returns relevant results based on the user's search criteria.
- Pre-conditions: The user has entered valid search criteria
- Steps:
  - a. Enter the search criteria and click on the "search" button
  - b. Verify that the search results are relevant and match the search criteria.
- Expected Results: The search results should be relevant and match the search criteria.

### **5.2. Integration Testing:**

The integration testing will be performed after the completion of the unit testing. The integration testing will ensure that all modules of the system integrate correctly and function together as a whole.

- Test Case ID: I001
- Test Case Description: Verify that the user can log in to the system using their credentials.
- Pre-conditions: The user has valid login credentials.
- Steps:
  - a. Enter the email and password and click on the "login" button.
  - b. Verify that the user is redirected to their dashboard.
- Expected Results: The user should be able to log in to the system using their credentials.

### **5.3. System Testing:**

The system testing will be performed after the completion of the integration testing. The system testing will ensure that the system meets all the requirements specified in the SRS. The system testing will also include testing of the non-functional requirements such as performance, security, user interface, compatibility, and accessibility.

- Test Case ID: S001
- Test Case Description: Verify that the company can log in to the system using their credentials.
- Pre-conditions: The company has valid login credentials.
- Steps:
  - a. Enter the email and password and click on the "login" button.
  - b. Verify that the company is redirected to their dashboard.
- Expected Results: The company should be able to log in to the system using their credentials.

### **5.4. User Acceptance Testing:**

The user acceptance testing will be performed by a group of end-users to ensure that the system meets their requirements and expectations. The user acceptance testing will be performed in a controlled environment to ensure that the feedback obtained is accurate and relevant.

- Test Case ID: UAT001
- Test Case Description: Verify that the job posting function is easy to use and understand.
- Pre-conditions: The company has a job posting to submit.
- Steps:
  - a. Log in to the system and navigate to the job posting page.
  - b. Enter the job posting details and click on the "submit" button.
  - c. Verify that the job posting is submitted successfully
- Expected Results: The job posting function should be easy to use and understand, and the job posting should be submitted successfully.

## **6. Conclusion**

This project helps in automating the existing manual system. This is a paperless work. It can be monitored and guarded remotely. It reduces the man power required and provides accurate information. The information gathered together over all the years can be saved and accessed at any time. For this reason, the data stored in the repository helps in taking decision by management. So, it is improved to have a Web Based system. All the Stakeholders Company and Users can get the required information without delay.

### **6.1. Existing System:**

- The existing system does not provide the option for job seeker to see number of jobs he or she has applied.
- The existing System does not have the facility for mobile alerts.

### **6.2. Proposed System:**

The development of this new website contains the following activities, which try to automate the entire process keeping in the view of database integration approach.

- This Site can provide the recruitment information sending option for the Job providers.
- This website can provide the message alert facility for the jobseekers.
- Administrator can control both job provider's and as well as jobseeker's information.

### **6.3. Future Scope:**

This project can be enhanced further by adding Exam Module for Selected candidates, preparation material for Job Seekers, online feedback system, Social Authentication for login. The software is flexible enough to be modified and implemented as per future requirements. We have tried our best to present this free and user-friendly website to all stakeholders.

## ⊕ User Dashboard Page :

The screenshot shows the user dashboard for the National Career Service Portal. On the left, there's a sidebar with a profile picture of a man, a greeting "Hello ansh", and several navigation links: Dashboard, Search Job, Check Response, Add Qualification, Change Password, Delete Account, and Signout.

The main content area has a section titled "Personal Information" with fields for First Name (ansh), Last Name (gupta), Email Id (a@gmail.com), and Mobile Number (9586000000).

Below this is a "FAQs" section with two questions:

- What happens when I update my email address (or mobile number)?** Your login email id (or mobile number) changes, likewise. You'll receive all your account related communication on your updated email address (or mobile number).
- When will my Career Service Portal account be updated with the new email address (or mobile number)?** It happens as soon as you confirm the verification code sent to your email (or mobile) and save the changes.

At the bottom of the page, there are footer sections for "NATIONAL CAREER SERVICE PORTAL" (with a brief description), "USEFUL LINKS" (Blog, Register, Search Jobs), and "SUBSCRIBE TO NEWSLETTER" (Email Id input field, newsletter icon, and social media links).

## ⊕ Search Job Page :

The screenshot shows the search job page for the National Career Service Portal. The sidebar is identical to the dashboard, featuring a profile picture, a greeting "Hello ansh", and navigation links for Dashboard, Search Job, Check Response, Add Qualification, Change Password, Delete Account, and Signout.

The main content area displays four tables of job listings:

Occupation Title	Employee Needed	Duration of Employee	Experience Required	Job Description	Preferred Sex	Skill Required
Onboard	100	5yr	2yr	Java Developer	Male	Java

Occupation Title	Employee Needed	Duration of Employee	Experience Required	Job Description	Preferred Sex	Skill Required
Onboard	100	5yr	2yr	Java Developer	Female	Java

Occupation Title	Employee Needed	Duration of Employee	Experience Required	Job Description	Preferred Sex	Skill Required
Onboard	100	5yr	3yr	Full Stack Developer	Female	Java, Python

Occupation Title	Employee Needed	Duration of Employee	Experience Required	Job Description	Preferred Sex	Skill Required
Onboard	100	5yr	3yr	Full Stack Developer	Male	Java, Python

At the bottom of the page, there are footer sections for "NATIONAL CAREER SERVICE PORTAL" (with a brief description), "USEFUL LINKS" (Blog, Register, Search Jobs), and "SUBSCRIBE TO NEWSLETTER" (Email Id input field, newsletter icon, and social media links).

## ⊕ Change Password Page :

The screenshot shows the National Career Service Portal's user interface. On the left, there is a sidebar with a user profile picture and the name "Hello ansh". Below the name are several menu options: Dashboard, Search Job, Check Response, Add Qualification, Change Password, Delete Account, and Signout. The main content area features a central illustration of a woman at a desk with a laptop, looking stressed, with a green box above her head containing a large white 'X' and some small text. To the right of the illustration, the heading "Change Your Password" is displayed, followed by two input fields: "Your Email" and "New Password", and a green "Change Password" button.
